"Molecular genetic analysis of myoC, a Dictyostelium myosin I.";
J. Cell Sci. 108:1093-1103(1995).
-I- FUNCTION: MYOSIN IS A PROTEIN THAT BINDS TO ACTIN & HAS ATPASE
ACTIVITY THAT IS ACTIVATED BY ACTIN:
-I- SUBUNIT: MYOSIN I HEAVY CHAIN IS SINGLE-HEADED. DIMER OF A HEAVY
AND A LIGHT CHAIN. INABILITY TO SELF-ASSEMBLE INTO FILAMENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-NOV-1995 (Rel. 32, Created)

TOGETHER WITH TOWAZ FUNCTIONS AS THE TRANSIT PEPTIDE RECEPTOR AT THE SURFACE OF THE MITOCHONDRION OUTER MEMBRANE AND PACILITATES THE MOVEMENT OF PREPROTEINS INTO THE TRANSLOCATION PORE. DIRECTLY INVOLVED IN THE PORE PORMATION. SUBUNIT: FORMS PART OF MITOCHONDRIAL RECEPTOR COMPLEX. SUBUNITION: Integral membrane protein. Mitochondrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Outer membrane.
SIMILARITY: BELONGS TO THE TOM40 FAMILY.
CAUTION: Ref.1 sequence differs from that
                                                                                                                                                                                                                                                                                                                                                               alpha-D-glucose 1-phosphate + UDP-galactose COFACTOR: Binds 1 zinc and 1 iron ion per su
                                                                                                                                                                                                                     SIMILARITY: Belongs to the galactose-1-phosphate uridylyltransferase family 1.

RE SIRVITAL FOR CORRECT EYE MORPHOGENESIS (OMMATIDIAL R7 NEURON FORMATION), THIS REQUIRES THE RASI/MAPK SIGNAL TRANSDUCTION CORGANIZATION AND CELL-CELL CONTACTS IN DEVELOPING OMMATIDIA.

CO PATHWAY. MAY BE INVOLVED IN THE REGULATON OF CYTOSKELETON CORGANIZATION AND CELL-CELL CONTACTS IN DEVELOPING OMMATIDIA.

CO PATHWAY. MAY BE INVOLVED IN THE REGULATON OF CYTOSKELETON COMMATIDIA.

CO PATHWAY. AND PHOTORELET OUT OUT TYROSINE = ADP + PROTEIN TYROSINE FROSEIN IS SEEN IN VISCERAL MESODERM, HINDGUT, BRAIN, ANAL PADS CHARLES AND PHOTORECEPTOR PRECURSORS IN THE EYE-ANTENNA DISKS CONTROL TO THE MORPHOGENETIC FUUROW.

CO POSTERIOR TO THE MORPHOGENETIC FUUROW.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is given in a specification relating to an isolated nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein vI (GPVI), also called TANGO 268. The GPVI polynucleotides and their modulators, e.g. antisense nucleic acids, ribozymes and antibodies, are useful for preventing, treating and diagnosing disorders associated with abstrant expression or activity of CGPVI. These disorders include bleeding disorders (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia), cardiovascular diseases (e.g. atherosclerosis and myocardial infarction), immunological diseases (e.g. platelet disorder) and embryonic liver disorders preferably they are used to prevent acture cardiac ischaemia following angioplasty and metastatic cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis

Claim 10; Page 111; 236pp; English

CC immunospecifically binding to a TANGO 268 (also referred as glycoprotein CC VI (GPVI)) antigen. The antibodies of the invention act to decrease or CC block TANGO 268 binding to extracellular matrix components, or as a CC Collagen or platelet release and aggregation blocker. The antibodies of the invention are useful for modulating proliferation, migration, CC morphology, differentiation and/or function of megakaryocytes and plateletes, including during development e.g. embryogenesis, modulating plateletes, including during development e.g. embryogenesis associated degramulation. They are also useful for modulating platelet aggregation and CC inflammation and/or thrombosis, and modulating disorders associated with abnormal or aberrant megakaryocyte and/or platelet proliferation, migration, morphology, differentiation and/or function, e.g. bleeding CC disorders such as thrombocytopaenia. Other diseases which may be condulated by these antibodies are thrombotic disorders, cerebral CC vascular diseases including angina pectoris, generation, pain and ulceration, currently componently causes including angina pectoris, myocardial infarction, coronary crestenosis, atheroscalerosis, etc); immunological disorders, cerebral CC vascular diseases, venous thromboembolism diseases invention, coronary crestenosis, atheroscalerosis, etc); immunological disorders, cerebral CC vascular diseases, venous thromboembolism diseases, coronary diseases, cerebral coronary diseases, cer variable heavy (VH) complementarity determining region (CDR)1, or VH CDR3; or VH CDR3; or VH CDR3, a generate the This invention antibodies of the invention. relates to a novel purified antibody comprising £a CDR2

Also described: (1) use of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain for identifying and obtaining an inhibitor of a pathological process; (2) use of the identified inhibitor for inhibiting activity of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain; and (3) a compound identified by the method, which binds but does not activate the receptor; and (4) a polypeptide capable of specific binding to the Fc-epsilon-R1 receptor alpha-chain. The method is useful for
                                                                                                                                                                                                                                                                                                                      AAO18434 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             obtaining an inhibitor of a pathological process e.g. imbalance between cell-bound and free IgE e.g. allergic disease (urticaria, late phase allergic reactions, intrinsic asthma, drug intolerance and food intolerance), IgE mediated disease or malignancy. The compound is useful for treating a pathological process, particularly conditional autoimmunity. The present sequence represents a human recombinant anti-FC-epsilon-Rl alpha autoantibody light chain protein sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for identifying and obtaining an inhibitor of a pathological process. The method comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-R1 receptor alpha-chain and an autoantibody against its alpha-chain. Also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 20; Page

AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or

Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intrabdominal fat associated with heart disease.
cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis
                                                                                                                                                                                                                                                                                           AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), wher the proteins are collectively known as colon cancer antigens.       amino acid sequence selected from at least one, two or three CDR region(s) of a VH or VL domain where the first antibody immunospecifically inhibits a VEGF-2 polypeptide. The isolated polymucleotide is useful in diagnosing, treating, preventing, prognosing, ameliorating or monitoring diseases associated with aberrant VEGF-2 or VEGF-2 receptor expression or lack of VEGF-2 or VEGF-2 receptor function, such as cancer and other proliferative disorders, cardiovascular disorders (arrhythmias), cerebrovascular disorders (e.g. cerebral disorders).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention.

No. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                              New isolated polynucleotide encoding an antibody which inhibits VEGF-2 polypeptide, useful for diagnosing, treating or preventing diseases associated with aberrant VEGF-2 expression or function,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cerebrovascular disorder; cerebral anoxia; inflammatory disease; infectious disease; autoimmune disease; rheumatoid arthritis; Systemic Lupus Erythematosus; allergy; diabetic retinopathy; psoriasis; angiogenesis; wound healing; vascular tissue repair; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antiarthritic; antidiabetic; ophthalmological; antiallergic; immunosuppressive; dermatological; antipsoriatic; vulnerary; antil CDR region; VH domain; VL domain; immunospecific; VEGF-2; cancer; proliferative disorder; cardiovascular disorder; arrhythmia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                         diabetic retinopathy or psoriasis. The polynucleotide, polypeptide and antibodies may also be used to stimulate angiogenesis, wound healing, and promoting vascular tissue repair. The polynucleotide and polypeptide may also be used for in vitro purposes related to scientific research, synthesis of DNA and manufacture of DNA vectors, and for the production of diagnostics and therapeutics to treat human diseases. This sequence represents a human VEGF-2 related protein of the invention.

                      CC The present invention describes a method for identifying and obtaining CC an inhibitor of a pathological process. The method comprises determining CC if a compound is capable of modulating the binding of the Fc-epsilon-R1 CC receptor alpha-chain and an autoantibody against the Fc-epsilon-R1 receptor CC described: (1) use of the autoantibody against the Fc-epsilon-R1 receptor CC alpha-chain for identifying and obtaining an inhibitor of a pathological CC process; (2) use of the identified inhibitor for inhibiting activity of CC the autoantibody against the Fc-epsilon-R1 receptor alpha-chain, and CC (3) a compound identified by the method, which binds but does not CC activate the receptor; and (4) a polypeptide capable of specific binding CC to the Fc-epsilon-R1 receptor alpha-chain. The method is useful for CC obtaining an inhibitor of a pathological process e.g. imbalance between CC cell-bound and free IgE e.g. allergic disease (urticaria, late phase CC allergic reactions, intrinsic asthma, drug intolerance and food CC infolerance) TCF madiater disease contains the contains of the contains of the contains the contains of the contains the contai

an

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be

Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Blys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAlDS; vaccine; cancer; immune; autoimmune disorder; immunodeficies systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for treating a pathological process, particularly conditional autoimmunity. The present sequence represents a human recombinant anti-Fc-epsilon-R1 alpha autoantibody light chain protein sequence the present invention.
                                                                                                                                                 This invention describes novel antibodies that immunospecifically bind (B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The introdies of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                    Claim 1;

This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell collection and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiALDS activity and can be used in vaccines to CC inhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be CC and activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lupus erythematosus, rheumatodi arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC acquired immunodeficiency syndrome (AIDS)).                                                                                                        This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases as concer, immune, and autoimmune disorders and diseases as concer, immune, and autoimmune disorders and diseases as concer, immune, and autoimmune disorders and concerns the content of a province of the properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficie;

                                           cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and
acquired immunodeficiency syndrome (AIDS)). ABI the antibodies and fragments of the antibodies of the invention.
                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind of B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; anticheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency;

                                                                                 This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity and super antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                administering to a mammalian subject a composition comprising the prote (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II). (II) and (III) are useful for diagnostic evaluation of disorders. (I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound heali and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.

Note: The sequence data for this patent did not form part of the printe specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification, but was obtained in electronic format directly from WIPC specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang YT,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                              Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq length: 0
